VooServers

Company Newsletter

Introduction from Matt Parkinson

Welcome to the first edition of our bi-annual newsletter.

We have had a busy few months here at VooServers with expansion both in the UK and the US. Our UK technical team has grown gaining three new members of staff since January, and we plan to grow the team further later in 2019. We have also just launched Vinters Corp, our New York based subsidiary, which is an extension of our US presence.

Although our business has grown internationally, our roots remain very much in Kent and we are passionate about supporting our local community. Myself and our Web Strategist Jordan had the recent pleasure of visiting The FAR Academy Trust in Whitstable to see how the students are benefiting from the computers and servers that we donated to them.

We have settled into our new office at Vinters Park, Maidstone and have already found that it has vastly improved our communication and work as a team. It is double the size of our previous office, providing a nicer environment for inviting our clients to visit.

Cybersecurity is high on the agenda for businesses of all sizes, especially important for service providers such as ourselves to be ahead of the curve in this area. Our team is always looking for new ways to support our clients, most recently through our new security products.
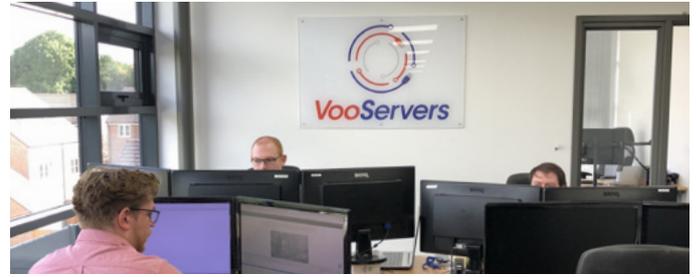

VooServers now offers F5 Advanced WAF and Exchange Advanced Threat Protection, which helps to identify potential threats to your business.

We hope you enjoy reading our newsletter. Please get in touch on 01622 524200 or alternatively via sales @ vooservers.com to learn more about how we can help your business.

Matt Parkinson, Technical Director

Our Visit To The FAR Academy Trust

Earlier this year, we donated computers and a server to The FAR Academy Trust in Whitstable. CEO of the academic charity, Brent Lewis, recently showed our Technical Director Matt Parkinson and Web and Marketing Strategist, Jordan Bradley-Stopps around the educational learning hub to see how the students are benefiting from the computers.

The FAR Academy Trust is a unique facility that provides an alternative education programme for young people aged 16-24 years old that may otherwise struggle in a regular classroom setup. Through the donation of the computers, the young people are able to complete the vocational and project-based areas of the qualifications more easily. This includes research tasks, printing designs and using CAD software for the laser cutter.

Brent explains how the computers have made a difference to the young people at the academy: *"The support that we have received from VooServers has been invaluable.*

"Supplying our charity with a server and computers for our young people to use has made an amazing difference to their learning experience, this addition in the facilities that we are able to provide has become an integral part of their learning journeys."

Growing Our UK Team

We are excited to be growing our UK team and have had three new staff members join our technical team since January. This includes our new evening engineer, Robert Pluck, who covers our UK service desk until 11pm. We plan to grow the team further later in the year and are always on the lookout for great people to join our team.

Launching our New York-based subsidiary, Vinters Corp

In April 2018, we launched our sister company, VintersIT, which delivers highly responsive managed IT services. One year on, we have now launched Vinters Corp in New York City, which marks an extension of this existing brand.

We have built a successful presence in the US with data centres in New York City and Seattle supporting UK companies with operations Stateside. We hope to expand our server capability into new locations such as Portland and New Jersey, in partnership with our US data centre partner.

The launch of Vinters Corp provides us with the opportunity to develop our US team. The initial focus will be on winning new business across New York state and will later move to Texas, California and Florida.

Both US and UK customers will benefit from Vooservers' customer service desk, with 8am-11pm GMT coverage provided to all clients as standard, and further enhanced by access to 24x7x365 support.

New Security Products

Cybersecurity is one of our industry's hot topics so in light of this we have launched our new security products: F5 Advanced WAF and Exchange Advanced Threat Protection.

Exchange ATP

Protect your business against cyber threats including phishing and malware with Exchange Advanced Threat Protection. It will help your business to identify what websites are safe to use and has the capacity to monitor billions of emails a day. It also identifies online threats and makes recommendations for how businesses can deal with them.

Exchange ATP develops user awareness helping to warn users before they click and how to report suspicious content. This is a fast and affordable solution to dealing with security threats.

F5 Advanced WAF

Web application firewalls protect your business from data breaches by correcting vulnerabilities and preventing potential attacks. F5 Advanced WAF defends your online applications from attacks from bots and keeps your sensitive information safe. The product uses machine learning to detect threats and stop attacks before they happen.
